SELECT BAG SEALERS

# Delivering product security and traceability, worldwide

With origins as far back as the beginning of the 20th century, when it was invented by a surgeon as a rudimentary bandage, adhesive tape has found a range of uses throughout the years. It wasn't until the late 70s, however, when applying adhesive tape to the necks of bags using automatic bag sealers rose to popularity, and it has been the number one choice ever since.

We have been at the forefront of this innovative technology for over 30 years, and our team has made a name for itself as the go to supplier of the taped seal for the food industry, providing safe, flexible and cost-effective bag sealing. Today, our tape-based bag sealing technology helps household names across the globe, including Hovis and Warburtons, overcome traceability and food safety issues.

Our approach is simple: we provide total sealing solutions. In practice, this means supplying a high-quality range of bag sealing tape and equipment backed with extensive technical help, on-site service engineer support, proactive preventative maintenance and a comprehensive range of parts held in stock for quick delivery.

# The Select Seal Benefits

A weak or ineffective bag seal can have a significant impact on product quality and integrity, not to mention brand and reputation. Our high performance, coded taped seals are designed and produced here in the UK using only the highest quality materials, resulting in peace of mind throughout the supply chain. Select Seals are:

**Safe:** Re-sealable tape is widely recognised as the safest means of sealing bags over plastic tags or metal clips, twist ties, and if swallowed will pass through the body without causing harm.

**Secure:** Testing shows that a Select Bag Sealers seal can be opened and resealed over and over without losing adhesion or damaging the pack.

**Coded and traceable:**

Each coloured-foil seal can be printed individually with key data, and it is also metal detector friendly for added traceability, eliminating contamination risks during the production process.

**Economical:** The taped seal is globally recognised by the food industry as a cost-effective bag sealing method, particularly when there is a requirement for regular re-sealing.

## Increased Freshness:

Our airtight taped seal delivers complete pack tightness, increasing freshness and resulting in valuable longer shelf life.

## Attractive:

Our taped seal products come in an assortment of colours and substrate options, and luxury ranges can be readily differentiated.

## Consistent:

By using either our Flexi-Plus or TS3-EP bag sealing machines, you can guarantee that every seal will be reproduced identically, from length to printing, creating uniformity and consistency.

## Brand Integrity:

Taped seals ensure that pack tightness will not be compromised during transport and the pack presentation standards you require for brand integrity will be retained.

# Flexi Seals for Freshness:

## Safe, adaptable and cost-effective bag sealing

Flexi Seals are manufactured for our Flexi Plus sealing machine, using purpose designed foil and a high performance re-sealable adhesive to provide a safe, adaptable and cost-effective bag seal. with broad-ranging options for creating a seal that meets performance, brand and traceability criteria.

The adhesive tape used to create a Flexi Seal enables it to be opened and re-sealed as many times as required without losing its integrity. It also means that the seal maintains its original position, meeting the required pack presentation standards for brand integrity and not allowing pack tightness to be compromised during transport.

# Flexi-Plus Bag Sealer:

## Maximising production efficiency

Robust and efficient, yet simple to operate and maintain, our state of the art fully-automated equipment Flexi-Plus Bag sealer can seal more than one a second.

It can be readily integrated into existing lines, but is also highly effective as a stand-alone unit when combined with a suitable conveyor.

Designed for ultimate reliability and low maintenance, a Flexi-Plus Bag sealer can help minimise downtime and deliver genuine cost efficiencies. They also benefit from an easy to use operator interface for system diagnostics and machine running status.

# Easy Seals:

## Helping you retain brand integrity

Easy Seals are manufactured using specially constructed coloured foil with a re-sealable adhesive and feature a unique, easy-open flap. Paper tabs are affixed to both ends of the taped seal, allowing easy opening, and our high performance adhesive tape allows the seal to be opened and re-sealed as many times as required.

Unlike other seals, the adhesive tape on Easy Seals maintains its original position, which means that pack tightness won't be compromised during transport and the pack presentations standards you require for brand integrity will be retained.

# TS3-EP Bag Sealer:

## Safe and secure bag sealing

Our popular TS3-EP Bag sealer is a robust and efficient table top sealing machine that is simple to operate and easy to maintain.

Delivering a printed, tamper-evident adhesive tape seal, it is suitable for use with paper or plastic bags. Designed initially for the bakery industry, we are increasingly seeing the TS3-EP Bag sealer being used more widely across other industries, including fresh produce and chilled and frozen meat.

As the global market leader in the design and production of automated high-quality bag sealing machines, we are proud to say that 95% of all bagged bread in the UK is sealed by one of our tape sealer machines.

# Making bag sealing affordable

To make our popular bag sealing equipment affordable for businesses of all sizes we have introduced a leased option, allowing businesses to rent a machine in exchange for a monthly fee over a five-year period.

And because we know how important budget and cashflow planning are in fast moving production environments, we have introduced fixed price annual service contracts to help customers benefit from regular and proactive machine servicing at an affordable monthly fee.

Our equipment is designed and built in the UK, which means we hold a comprehensive range of spare parts in stock at our warehouse that are available for quick delivery should a replacement become necessary.

# Seal of Approval

*“Warburtons Newburn have used Select Bag Sealers for a number of years. Most recently, we purchased two new Flexi-Sealers to replace old, obsolete equipment. The new Flexi-Sealers have been installed and running on our site for almost a year now and have performed very well in this time. The Flexi-Sealer has proven to be a robust and efficient sealer, which requires minimal maintenance attention. We will definitely consider purchasing additional Flexi-Sealers should they be required in future.”*

*“We are very pleased with the way our two SBS machines have worked so far. They haven't missed a beat and going forward we will be looking to set up yearly service visits from SBS to ensure both machines continue to deliver the best possible performance.”*

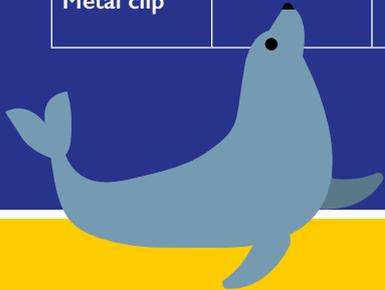

*“The Flexi-sealer has proven to be operator friendly, easily maintainable and reliable. With the adjustable height function it produces a high quality consistent seal to a variety of products within our bread range. Select Bag Sealers have given excellent technical support and after sales service to a very successful installation.”*

*“Having worked with SBS for a number of years now, we had no concerns ordering four of their Flexi-Sealers for our new production facility. Following the installation and commissioning of the equipment, we would have no hesitation in recommending both SBS and their Flexi-Sealer as both the sealers and the company have given an excellent quality service.”*

# Comparison table

	Cost effective	Resealable	Up to 33,000 seals per reel	Safe (if accidentally swallowed)	Fully controllable (can seal thin plastic and thick paper bags)	Metal detector friendly	Presentation	Improved freshness
High quality coded seal	✓	✓	✓	✓	✓	✓	✓	✓
Plastic tag		✓				✓		
Twist tie	✓	✓					✓	
Metal clip		✓					✓	✓
